I'm a Project Manager

I'm a Cybersecurity Specialist

I'm a Data Analyst

Be an ETR. Join us now!

The Emerging Talent Rotational (ETR) Program provides a multi-faceted working experience for fresh graduates in our IT organisation. Participants go through three rotations in two years and a half before settling into a role of their choice.

I now have experience as an Associate Specialist in 3 different roles - ERP, Manufacturing IT, Project Management & Business Operations. To be able to learn and get experience in these roles within a span of 2 years is a huge benefit that sets up the perfect foundation for a bright career. – Nishanthi Jayakumar

The ETR program gave me the exposure to the company's organisational structures and different business functions. At the same time, the learning process that is based on various business case studies, eased the transition from academia to industry and made me even more effective in my role. – Nicole Li

It is a challenging yet rewarding experience that pushes my boundaries. My colleagues have been especially friendly and supportive in helping to bridge the gap and grow. – Renata Krisno

The ETR program gives me opportunities to experience different facets of IT, gain essential technical knowledge and at the same time sharpen important soft skills. – Jessie Liu

Develop technical, business and leadership skills

What it's like to be an ETR?

Janelle Zou on being an ETR

I graduated with a Degree in Information Systems, Second Major in Advanced Business Technology. Before graduation, I was looking for an opportunity that could leverage on my knowledge equipped as an Information Systems undergraduate and also learning prospects that could help develop and advance my career. In my last semester at Singapore Management University, I chanced upon MSD during an information session organized by the School of Information Systems. MSD offered the ETR program that provided the

opportunity of rotation to 3 different functions within MSD's IT organisation in 2 years, which was very attractive to fresh graduates like me who wanted the flexibility in exploring our interests within IT. The first round of group interviews helped me understand the company's values, mission and ethical standards, which was truly inspiring and closely aligned to mine. Throughout the last half a year as an ETR at MSD, I was exposed to a lot of learning opportunities as well as working with many other experienced people throughout the organisation whom I can always learn a thing or two from. The scope of work in my current function is also very interesting and I look forward to developing my career alongside the company.
